

ENGINEERING LIMITED

KERRUSH SUCSESSES

THE COMPANY: 'BIG JOHNS' – one of the fastest growing chains of takeaways in Birmingham.

THEIR PROBLEM: With over 12 sites including their own chipping plant and distribution centre, Big Johns needed an effective waste solution to coincide with their new, huge menu range.

OUR SOLUTION: They have taken their waste management into the 21st Century, by installing LSM balers at **all** their sites.

SAVINGS: They are now able to bale their cardboard and backhaul it to their distribution centre, where they now get revenue for what was their waste!

SOME COMMENTS: 'We were actively looking for better ways to manage the huge amount of cardboard which we generate at our sites, and LSM came up with a great solution. Along with the reduction in our bin collections, and revenue gained from the baled cardboard, we expect to make great savings on our waste management cost.'
