

ENGINEERING LIMITED

KERRUSH SUCCESES

THE COMPANY: JFC Europe Ltd., based in Shropshire, England

THEIR PROBLEM: JFC Europe Ltd, manufacturer of moulders that transform your ideas into quality plastic products, were generating three 1,000lt bins of waste every week.

OUR SOLUTION: An LSM Engineering WR350 baler was installed inside the premises, and connected to their own main compressed air line.

SAVINGS: The annual waste disposal bill has been reduced by £1,080+VAT per annum. Both cardboard and plastic are now baled and collected by a local recycling company every month.

ADDITIONAL BENEFITS: •Since installation, only one 1000lt bin is used and filled per week, hence the creation of much more valuable space.

•The storeroom and the yard are much tidier.

SOME COMMENTS: *'From next year, the cost of waste disposal will increase significantly due to price increases by our local authority. While the savings we are making at the moment are substantial, next year our savings will be more than doubled, than if we had not installed the baler!'*
